

## Special Colloquium

### *Monge-Ampere operators and applications*

Mihai Paun (Korea Institute for Advanced Study )

**Abstract:** We will highlight a few properties of the Monge-Ampere operators which make them useful in the study of some global problems arising from complex algebraic geometry. At the end of our presentation, we will present the main ideas of the numerical characterization of the Kaehler cone of a compact complex manifold.

*Tea after the talk*
