

Justify your solutions and show your work.

1. Differentiate the following functions (with respect to x).

(a) $f(x) = x^3 \cos(e^{x^2+2x})$

(b) $g(x) = \frac{2^{3x+1}}{\ln x}$

(c) $h(x) = \int_3^{2x} \frac{1}{1+t^3} dt$

2. Sketch a graph of the function $f(x) = \frac{x}{x^2+1}$. Label with x and y coordinates all local maxima and minima and inflection points. Also indicate any asymptotes or holes.

3. Compute the following limits.

(a) $\lim_{x \rightarrow \pi} (1 - \sin x)^{\cos x}$

(b) $\lim_{x \rightarrow 0^+} \frac{e^{2x} - 1}{e^{3x} - 1}$

(c) $\lim_{x \rightarrow \infty} \frac{x^3 + 3x + 5}{3x^3 - 2x + 7}$

4. Ted wants to build a box with a square base and surface area 5 sq. meters. What is the largest possible volume that his box can have? (Use calculus to justify your answer.)

5. Evaluate the following:

(a) $\int_0^2 u \sqrt{4u+3} du.$

(b) $\int \frac{\sin(\ln x)}{x} dx$

6. The average value of a function f over an interval $[a, b]$ is given by $\frac{1}{b-a} \int_a^b f(x) dx$. find the average value of $f(x) = x(x^2 - 7)^3$ over the interval $[-1, 1]$.
