

# Rate of Growth of Functions

(The special case in which  $\lim_{n \rightarrow \infty} f(n) / g(n)$  exists)

Let  $g(n)$  be a fixed function.

# Rate of Growth of Functions

(The general case:  $\lim_{n \rightarrow \infty} f(n) / g(n)$  need not exist)

Let  $g(n)$  be a fixed function.

	<p style="text-align: center;"><b><math>\omega(g(n))</math></b></p> <p style="text-align: center;">Functions <math>f(n)</math> such that</p> $\lim_{n \rightarrow \infty} \frac{f(n)}{g(n)} = \infty$	<p style="text-align: center;"><b><math>\Omega(g(n))</math></b></p> <p style="text-align: center;">Functions <math>f(n)</math> such that for all <math>n</math> sufficiently large,</p> $\frac{f(n)}{g(n)} \geq c_1,$ <p style="text-align: center;">for some constant <math>c_1</math> with <math>c_1 &gt; 0</math>.</p>
<p style="text-align: center;"><b><math>O(g(n))</math></b></p> <p style="text-align: center;">Functions <math>f(n)</math> such that for all <math>n</math> sufficiently large,</p> $\frac{f(n)}{g(n)} \leq c_2,$ <p style="text-align: center;">for some constant <math>c_2</math>.</p> <p style="text-align: center;"><math>O(g(n)) \supseteq</math> <math>o(g(n)) \cup \Theta(g(n)).</math></p>	<p style="text-align: center;"><b><math>\Theta(g(n))</math></b></p> <p style="text-align: center;">Functions <math>f(n)</math> such that for all <math>n</math> sufficiently large,</p> $c_1 \leq \frac{f(n)}{g(n)} \leq c_2,$ <p style="text-align: center;">for some constants <math>c_1</math> and <math>c_2</math> with <math>0 &lt; c_1 &lt; c_2 &lt; \infty</math>.</p>	<p style="text-align: center;"><math>\Omega(g(n)) \supseteq</math> <math>\omega(g(n)) \cup \Theta(g(n)).</math></p> <p style="text-align: center;">Note <math>g(n)/(1+\cos(n))</math> is in <math>\Omega(g(n))</math> (Let <math>c_1 = 0.5</math>), but not in <math>\omega(g(n)) \cup \Theta(g(n))</math>.</p>
<p>Note <math>g(n)(1+\cos(n))</math> is in <math>O(g(n))</math> (Let <math>c_2 = 2</math>), but not in <math>o(g(n)) \cup \Theta(g(n))</math>.</p>	<p style="text-align: center;"><b><math>o(g(n))</math></b></p> <p style="text-align: center;">Functions <math>f(n)</math> such that</p> $\lim_{n \rightarrow \infty} \frac{f(n)}{g(n)} = 0.$	

Note that, in the general case, some function  $f(n)$  are in none of the categories above.

For example, if

$$f(n) = g(n) \tan^2(n),$$

then  $f(n)/g(n)$  takes on both values arbitrarily close to 0, and values arbitrarily large, as  $n$  increases. This implies

$\lim_{n \rightarrow \infty} f(n)/g(n)$  doesn't exist, and neither of the constants  $c_1$  or  $c_2$  exist.

*Example:* Here are various ways to write the approximation to  $\lg(n!)$  given by Stirling's formula. Each line gives a more careful approximation than the line above it.

$$\lg(n!) = \Theta(n \lg(n))$$

$$\lg(n!) = n \lg(n) + o(n \lg(n))$$

$$\lg(n!) = n \lg(n) + \Theta(n)$$

$$\lg(n!) = n \lg(n) - \lg(e)n + o(n)$$

$$\lg(n!) = n \lg(n) - \lg(e)n + \Theta(\lg(n))$$

$$\lg(n!) = n \lg(n) - \lg(e)n + 0.5 \lg(n) + o(\lg(n))$$

$$\lg(n!) = n \lg(n) - \lg(e)n + 0.5 \lg(n) + \Theta(1)$$

$$\lg(n!) = n \lg(n) - \lg(e)n + 0.5 \lg(n) + 0.5 \lg(2\pi) + \Theta(1/n)$$

# Rate of Growth of Functions: An Example

Let  $g(n) = n^2 \lg(n)$ .

$f(n)$	$o(g(n))$	$\Omega(g(n))$		$f(n)/g(n)$ as $n \rightarrow \infty$
		$\Theta(g(n))$	$\omega(g(n))$	
	$O(g(n))$			
$8n^2 \lg(\lg(n))$	✓			$\rightarrow 0$
$3n^2 \lg(n) + 12n^2 - 56n$		✓		$\rightarrow 3$
$n^2 \lg(n^5)$		✓		$= 5$
$n^2 \ln(7n)$		✓		$\rightarrow \ln(2)$
$n^3 + 3n^2$			✓	$\rightarrow \infty$
$(6n^5 + n^4) \lg(n) / (n^3 - 7n^2)$		✓		$\rightarrow 6$
$n^2 \lg(n)^3$			✓	$\rightarrow \infty$
$n^{2.1} / \lg(n)^3$			✓	$\rightarrow \infty$
$5n^2 \lg(n) / \lg(\lg(n))$	✓			$\rightarrow 0$
$4^{\lg(n)} 2^{\lg(\lg(n))}$		✓		$= 1$
$n^{1.9} \lg(n)^5$	✓			$\rightarrow 0$
$\lg(n)^{\lg(n)}$			✓	$\rightarrow \infty$
$\lg(n!)$	✓			$\rightarrow 0$
$\lg((n!)^n)$		✓		$\rightarrow 1$
$n^2 \lg(n) (2 + \sin(n))$		✓		oscillates in (1,3)
$n^2 \lg(n) (1 + \sin(n))$	in $O(g(n))$ only			oscillates in (0,2)
$n^2 \lg(n) \tan^2(n)$	in none of above			oscillates in $(0, \infty)$
