Data Science 2.0

Dan Spillane (IBM)

Abstract: What's the purpose of Data Science anyway? In this discussion we'll explore how we need to turn data science upside-down to create the real value of this powerful trade. We need to push desired (business, social, economic...) outcomes to the forefront (the hypothesis) and leverage data, data platforms and AI to develop the questions we don't even know to ask and then help answer. We need to be data pioneers not just data engineers. Looking forward to a fruitful and living dialogue on Data Science 2.0.
